

I₂cureTM

BioShield Antiseptic Lotion

An iodine-based 12-hour
broad-spectrum antimicrobial
protection for you and
everyone around you

I2Cure was founded with the objective to give a complete, long-lasting protection against microbes. As our first line of defense against germs, our skin is prone to hosting a large microbial load that can make their way into our body through the nose and mouth. With the COVID-19 pandemic still going strong, this can be rather inconvenient. The I2Cure BioShield Antiseptic Lotion has been developed to specifically address this problem. The 1500 ppm of iodine in the lotion turns your skin into an antimicrobial surface that ensures you have fool-proof protection.

How it Works

Step 1

Apply two small drops of I2Cure BioShield Antiseptic Lotion on your hands and rub until dry. You can also rub it on your lips and around your nostrils.¹

Step 2

The iodine kills any microbial load on your skin upon first contact.

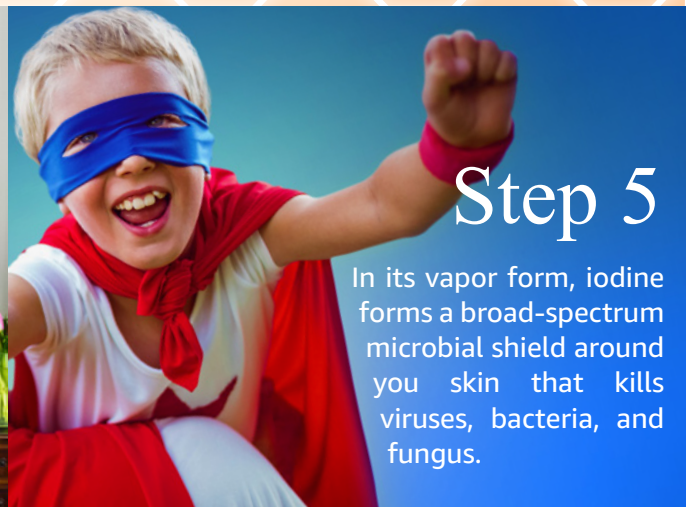

Step 3

Once rubbed in, the iodine in the lotion penetrates your unbroken skin and deposits itself just below the surface.

Step 4

The deposited iodine slowly diffuses back to the surface of your skin over the next 12 hours in the form of a colorless, odorless vapor.

Step 5

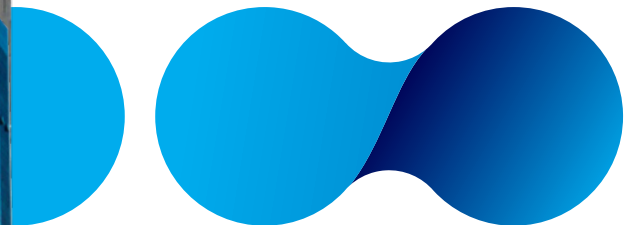

In its vapor form, iodine forms a broad-spectrum microbial shield around you skin that kills viruses, bacteria, and fungus.

¹It has no smell or taste, so it doesn't cause any discomfort.

How can I2Cure help you protect your workplace, religious site, and customers?

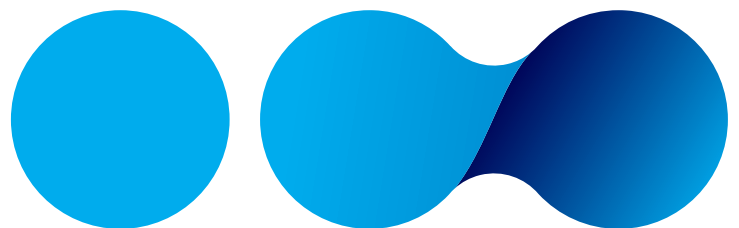

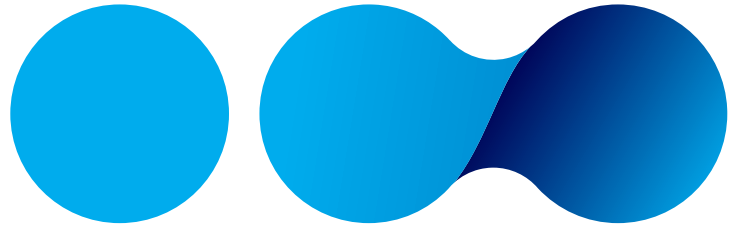

A dispenser at the entrance to your workplace or religious site can ensure that everyone is safe from the transmission of deadly viruses and diseases like the fearful COVID-19

With hospitals and primary care facilities being considered a hotbed for disease spread, a couple of drops of I2Cure can keep your physicians and patients as safe as they can be.

Provide a small sachet of I2Cure with your food, retail, or courier delivery to keep your customers safe.

*The possibilities
are seemingly
endless.*

Segments that can benefit from using I2Cure:

Airlines and Airports

Banks

Corporate Offices

Entertainment Zones

Food Delivery Applications

Government Offices/
Departments

Logistics Sectors

Healthcare Provider
Network

Hospitality
Industry

Modern Trade
POS
